

NeuroInsight Brain Tumor Analysis Report

Patient Name: real

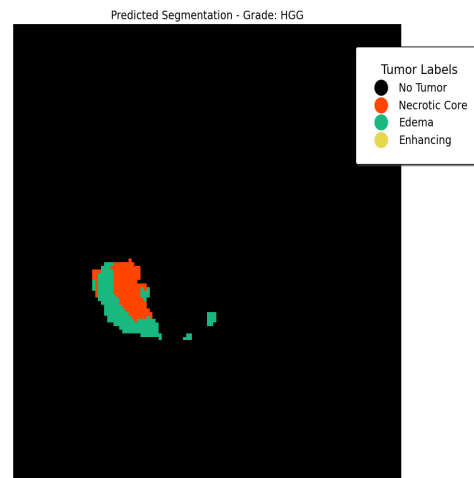

Tumor Grade: HGG

Report Date: April 23, 2025

MRI Scan Images

Original MRI Scan

Segmented Tumor Prediction

Analysis Summary

Growth Rate: Fast-growing, aggressive tumor that rapidly invades nearby brain tissue.

Typical Symptoms: May include headaches, seizures, personality changes, and neurological deficits that worsen quickly.

Clinical Significance: Requires urgent treatment. These tumors tend to be more resistant to treatment and have a higher recurrence rate.
